

ABSTRACT OF THE DISCLOSURE

An apparatus for cleaning medical transport boards comprises a closed chamber having first and second oppositely facing ends and having a first opening in the first end for receiving a board and a second opening at the second end for passing the board out of the chamber, a first partition in the chamber spaced from the first end for defining a disinfectant spray section, the spray section including a
5 spray delivery system for spraying disinfectant on all exposed surfaces of the board as the board passes through the spray section, a second partition in the chamber spaced from the second end for defining a rinse water section, the rinse water section including a water delivery system for flowing water over all
10 exposed surfaces of the board as the board passes through the rinse water section and a pair of power driven brushes located in the chamber between the first and second sections for scrubbing exposed surfaces of the board during passage of the board through the chamber.
